COMMODITY TRADE BY INDUSTRIAL SECTOR

Historical Summary 1984-1988

Attached is a statistical review of Canada's external merchandise trade classified by the principal industrial sectors for the years 1984 to 1988. The tabulations show total exports (including re-exports), total imports, and re-exports on a customs value basis. For exports and imports separate breakdowns are provided for five major trading partners: United States, Japan, United Kingdom, European Community (EC) and the Organization for Economic Co-operation and Development (OECD).

Canada's merchandise trade statistics are officially recorded and tabulated by Statistics Canada following a system of commodity classification. In this report, these commodity data have been allocated to the most nearly appropriate industry groups (1980 SIC), i.e., exports to the industries which have produced or manufactured these commodities in Canada, and imports to those industries which could or would produce or manufacture these commodities in Canada.

It should be emphasized that, although re-exports are included in the data for total exports on a customs value basis, these data should not be used to calculate the merchandise trade balance. The latter measure is more appropriately calculated using trade data adjusted on a balance of payments basis.

This report, produced from Statistics Canada's latest records, updates the previous Commodity Trade by Industrial Sector, Historical Summary, 1983-1987 issued by the Statistical Analysis Division, Industry, Science and Technology Canada, in 1988.

For the 1989 update presented here, a historical summary is provided only for the most recent five-year period (1984 to 1988). Any users requiring a longer time series are referred to the 1986 edition, which provided data back to 1966 on a 1980 SIC basis.

The data for the years up to and including 1987 are based on commodity data defined according to the Canadian International Trade Classifications (CITC). Commencing in January 1988, Canada adopted the new Harmonized System (HS) for commodity trade classifications. Because of differences in the concepts behind the CITC and HS classifications, users should note that the 1988 data is not strictly comparable with data for previous years.

This is particularly true at a three or four digit (SIC) level of aggregation where the new classifications have caused some shifts in the sector allocations from previous years. Since there is no benchmark between the CITC and HS Systems, it is not possible to measure the full impact of these changes. Also, the greater detail afforded by the HS System has permitted the inclusion of a few SICs for 1988 not previously reported on.

Statistics Canada has also extended a note of caution to users of the HS commodity data on which the sector statistics are based. Thus the 1988 statistics presented here should be viewed as preliminary. As the application of the HS classifications become more consistent and users are more familiar with the data, the SIC allocation may also be subject to further review.
